Seismicity of the Earth 1900 - 2007
Caribbean Plate and Vicinity
Compiled by Arthur C. Tarr, Susan Rhee, Gavin Hayas, Antonia Villaseñor, Kevin P. Farlong, and Harley Benz

RESOURCES AVAILABLE

- Download the full PDF of Seismicity of the Earth 1900 - 2007 from the USGS.
- Access detailed maps and information on seismic activity in the Caribbean region.

This map shows the seismic activity in the Caribbean region, including earthquake magnitudes and focal mechanisms along selected plate boundaries. It includes data from the period 1900 to 2007, highlighting significant events and their locations.

**Map Key:**
- Earthquakes are color-coded by magnitude and depth of focus.
- Plate boundaries are indicated with lines and labels.
- Pre-instrumental seismic activity is shown in yellow squares.

**DATA SOURCES:**
- USGS (2007) for updation and analysis.
- Other national and international data sources for specific regions.

**NOTES:**
- The map was created using the United States Geological Survey's (USGS) GMT software.
- The map is a useful tool for understanding seismic hazards in the Caribbean basin.

**Acknowledgments:**
- The authors thank the numerous contributors and institutions that provided data and resources for this project.
- Support from various agencies and organizations is gratefully acknowledged.

**Contact Information:**
- For more information, contact the USGS at gspsds@usgs.gov
- Visit the USGS website for the latest seismic activity reports.
